

SILKSTREAM™

Unlimited SILKSTREAM™ Applications

Automated Harvesting. SILKSTREAM™ can quickly and safely harvest 10 metric tons per hour of live fish, reducing labor costs and improving fish quality.

Cage-to-Cage Transfers. With a fish suction hose in one cage and a dewatering box discharge into the receiving cage, SILKSTREAM™ makes moving fish from cage to cage fast, safe, and easy.

Counting. SILKSTREAM™'s one-by-one delivery allows for accurate manual or electronic fish counting.

Sea Lice Removal. SILKSTREAM™'s smooth-flow, high-speed operation provides superior performance for releasing lice off the salmon. It is noted that 90% of the lice on a fish are efficiently removed mechanically.

ETI a Leader in Fish Transfer Systems

More than 950 ETI systems are in operation across the world, including ETI's well-recognized TRANSVAC® vacuum pumps. SILKSTREAM™, TRANSVAC®, and other ETI systems have an established reputation for durability and reliability, with a global service network that is responsive, knowledgeable, and available 24-hours.

STANDARD CONFIGURATION

SILKSTREAM™ Model SS-1020 PUMPING SYSTEM: (live transfer between 50.0 grams to 10.0 kg fish)

- Diesel driven-direct coupled Perkins, with control panel, primary water pump (centrifugal type), 10-inch diameter SILKSTREAM™ head and elbow dewatering device.
- 10" (254mm) live fish nozzle.
- Fish Discharge Hose- 10-inch diameter (254mm) x 20 feet.
- Primary water pump suction hose- 8-inch(204mm) diameter x 20 feet.
- Fish suction hose- 10-inch diameter (254mm) x 60 feet (with quick release fittings at pump).
- Dewatering elbow- 10-inch diameter
Primary water foot valve (check valve) with strainer.
- Priming pump (12 VDC electric).

Note: All hoses come with stickers, clamps and O-rings.

OPTIONS

Dewatering box—3 feet x 3 feet (91cm x 91cm).

Priming pump (DC electric).

Shipment: 4-6 weeks after receipt of order.
